Jhana,

I called Lee, and he said that “he was told” that it was the intake for the Farmington Reservoir.

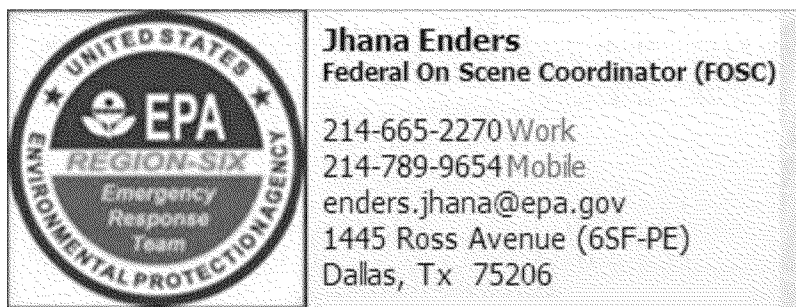

Hope that helps.....but he said that he did not personally confirm that info.

Juan

Juan,

The maps are a little inconsistent...do you know which water supply system FW 012 is? On the water intakes map it could either be 1) Farmington Water System, Animas River Pump Station #2 or 2) Morningstar Water Supply. Thanks.

Subject: Surface Water Sampling & Sed.,.....Team 2

Jhana,

Thanks for helping with the citizen information requests today.

Surface water and sediment Team 2 took their water and sediment samples at the 5 locations.

This work went normally.

During the first two sample site collections, we spoke with three separate individuals. Each was given the Community Outreach leaflets, and I spoke with each of them, answered some of their questions and referred them to tonight's meeting in Farmington at the Civic Center.

At FW 012 sample site, we met with a representative from the Flora Vista Water Supply, named Darrell. He was concerned about having their municipal water wells sampled. I gave him the 844 number, and asked him and his supervisor to attend tonight's meeting in Farmington to get their municipal well questions addressed, and if wanted, to schedule well sampling and address their "draw-down" questions for large volume wells.

Also at FW 012, a Mr. Joe Jaquez [Personal Phone/Ex. 6] stopped to talk with me about the irrigation ditches, and their sampling and use. He is President of this ditch which is called the Halford Community Ditch. He was also encouraged to attend tonight's meeting and given a leaflet.

At the MW 020, we met with the Morning Star Water Supply Operations Manager, Thomas Barrow [Personal Phone/Ex. 6] **He stated that he would be out of water by tomorrow, and that his Water Supply provides water for 6000 people.** They need on an emergency basis, EPA provided water and an NSF approved pump to put the water into their tanks. He spoke with you over the phone as well.

He says that he has not heard anything about a pump and water delivery this afternoon, but is preparing to receive the water.

Thanks

Juan
